

## Frequently Asked Questions

# HYLOTYTE RED 100

- 01 What is Hylotype Red 100?**

Hylotype Red 100 is a semi-hardening gasket sealant
- 02 Is Hylotype Red 100 water resistance?**

Yes Hylotype Red 100 has excellent water resistant characteristics even at temperature.
- 03 What is Semi-Hardening?**

Semi-hardening means the product is non setting initially but after a period of time or exposure to heat it will vulcanise to form a rubber like elastomeric sealant increasing its resistance to fluids and environmental conditions.
- 04 Can Hylotype Red 100 be used in contact with fuel?**

No. Hylotype Red 100 is not resistant to fuel and should not be used. Hylomar M can be used for this type of application.
- 05 Can Hylotype Red 100 be used on rubber gaskets/o-rings?**

Hylotype Red is suitable for use on rubber o-rings and gaskets. Care should be taken to make sure the solvent has fully evaporated prior to assembly.
- 06 Does Hylotype Red 100 contain silicone?**

No. Hylotype Red 100 does not contain silicone.
