

Frequently asked Questions...

HYLOMAR M AEROSOL

01 What is Hylomar Aerosol?

Hylomar Aerosol is the sprayable version of Hylomar M and is specifically used for coating traditional gaskets with ease

02 What is the difference between Hylomar M and Hylomar M Aerosol?

Both products are the same. Hylomar Aerosol is used for ease of application on gaskets or large surface areas.

03 Can I use Hylomar Aerosol on cylinder head gaskets?

Hylomar Aerosol is excellent for use as a dressing on most types of cylinder head gaskets. It should not be used as a replacement for cylinder head gaskets.

04 Can I use Hylomar Aerosol on rubber gaskets/o-rings?

Hylomar Aerosol is suitable for use on rubber o-rings and gaskets. care should be taken to make sure the solvent has fully evaporated prior to assembly.

05 What makes Hylomar different from other sealants?

Hylomar is highly resistant to oils and fuels while remaining as a non-setting material. This allows for unlimited assembly time and easy disassembly.
