

## Information Regarding the Shelf Life of Hylomar Products

All products should be stored in a cool, dry place, out of direct sun-light, between 5°C and 25°C in their original, unopened containers.

Storing products outside this temperature range, in direct sunlight and/or in damp conditions may have adverse effects on the product and will invalidate the shelf life.

The shelf life begins on the date of manufacture which can be determined from the batch number. The batch number is a 7 digit number, the first two digits of which are the year of manufacture, the second two are the month of manufacture, and the final three are the unique identifier for that batch.

E.g. batch number 1407154 was manufactured in July 2014 and can be uniquely identified by "154".

Batch numbers can usually be found stamped onto the crimp of tubes, stamped onto plastic cartridges or on the barcode sticker.

If a product you are using is not included on the shelf life chart please contact a member of our sales team for more information.

Information given in this publication is based upon technical data gained in our own and other Laboratories and is believed to be true. However the material is used in conditions beyond our control thus we can assume no liability for results obtained or damages incurred through the application of the data present herein.
